Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were cultured in the YEA medium for 24 h and then adjusted to the OD<sub>600</sub> of 0.1. The *Agrobacterium* strains were then mixed with the plant cells and cocultured for 24 h. The plant cells were then cultured in the selection medium for 2 weeks. The transformation efficiency was calculated as the number of transformants per 10<sup>6</sup> plant cells. The data are the mean ± SD of three independent experiments.
